DIY SHED PLANS / FREE PLANNING WORKSHEET

Shed Builder Starter Checklist

A one-page worksheet to use before you pick a plan or buy materials.

1. Decide what you need to store

☐ List the items that need to fit. Measure the biggest one and note how it will turn and roll through the doorway.

Largest item

Width × height × length

2. Check where the shed could go

☐ Sketch the yard, access route and proposed location. Mark drainage, door swing and room to maintain the shed. Verify property lines, setbacks, permits and any HOA restrictions before choosing a footprint.

Available footprint

Access route or obstacles

3. Compare plans before you choose

☐ Check the floor size, outside dimensions, finished door opening and foundation assumptions against your needs. Look for drawings, a materials list and instructions that agree with each other.

Design under consideration

Questions to resolve

4. Make a pre-build list

☐ List the tools and help you need. Use the verified plan to request current local prices. Schedule material delivery and identify the site or design questions you need answered before building.
